

MAX BADER

714-768-0616 | mibader@uci.edu | [linkedin.com/in/max-bader](https://www.linkedin.com/in/max-bader) | github.com/max-bader

Education

University of California, Irvine

Expected: June 2027

B.S. Computer Science

GPA: 3.4

Relevant Coursework: Data Structures/Algorithms, Object-Oriented Programming, Computer Architecture, Artificial Intelligence, Discrete Math, Discrete Structures, Information Retrieval, Machine Learning, Linear Algebra, Statistics

Technical Skills

Languages: Python, Java, C/C++, HTML/CSS, JavaScript, TypeScript, SQL, R

Technologies/Frameworks: React, Next.js, Node.js, Flask, FastAPI, PostgreSQL, Supabase, Prisma, Drizzle ORM, Redis, AWS (S3), Cloudflare, Vercel, Playwright, Bun, Git/GitHub, NumPy, pandas, scikit-learn, TensorFlow

Experience

CodeHS

June 2026 – August 2026

Software Engineer Intern

Chicago, Illinois

- Built multi-tenant authentication for deployed AI-generated applications, implementing revocable sessions, Google OAuth with PKCE, and per-app PostgreSQL data isolation through role grants and row-level security across production.
- Designed and shipped server-side AI and secrets infrastructure allowing client-only applications to securely call AI models and third-party APIs without exposing credentials in browser bundles, with encrypted secret storage, host-pinned requests, rate limiting, atomic usage accounting, and a published npm SDK across deployed applications.
- Built visual click-to-edit for generated applications by instrumenting TSX with the TypeScript compiler API to map rendered DOM elements back to exact source locations, remaining compatible with existing projects without build-config changes and backed by 16 unit-test files plus Playwright E2E testing and about 1,150 test cases throughout the codebase

YesMedia

January 2026 – June 2026

Software Engineer Intern

Los Angeles, California

- Built and maintained a multi-tenant CMS admin panel using Next.js, TypeScript, Prisma, and PostgreSQL that deploys and manages 49 isolated client sites from a shared, configurable codebase, shipping virtual tour editing, dynamic routing, reusable content components, and a batch save system with undo/snapshot support.
- Developed a batch save system with undo/snapshot functionality, and built an end-to-end AWS S3 media upload pipeline handling 670 images/videos across virtual tour pages with support for upload, deletion, and reordering.

DapLab

September 2025 – December 2025

Software Project Lead

Irvine, CA

- Scaled a backend platform from single-school deployments to 3 school districts, designing tenant-isolated APIs and data models that preserved performance and data separation as usage grew across diverse use cases.
- Led development of core backend services and internal admin tooling, diagnosing and resolving production issues to improve reliability in a live, user-facing environment at scale with rapid iteration cycles.

AlgoVerse

March 2025 – July 2025

Machine Learning Researcher Lead

Remote

- Designed and implemented a Python-based machine learning pipeline combining NLP preprocessing with Graph Attention Networks to detect factual inconsistencies.
- Achieved 96% detection accuracy on adversarial fabrications with a lightweight CoVe-Kernel similarity baseline (MiniLM embeddings + RBF distance threshold); surfaced failure modes in fine-grained numeric & causal edits for calibration.

Projects

TradeStreet - AI Synthetic Market

- Developed a real-time synthetic stock market simulation using React, TypeScript, and Vite, implementing a custom React hook to manage market state with price updates every 4 seconds, AI-generated events, and candlestick charts
- Optimized performance by implementing memoization with useMemo, useRef to prevent re-renders, and dependency array management, eliminating flickering in real-time charts and reducing render cycles by 80%.

AskHer - Emotional Support App

- Built a production-ready full-stack app: React frontend + FastAPI services backed by Supabase (Auth, RLS) to deliver secure user profiles, community posting, and peer-support engagement features.
- Modeled relational schemas & designed versioned RESTful endpoints in Supabase for scalable, low-latency read/write of user interactions, chat messages, and community activity streams; instrumented for growth.
